

HydraLuxe

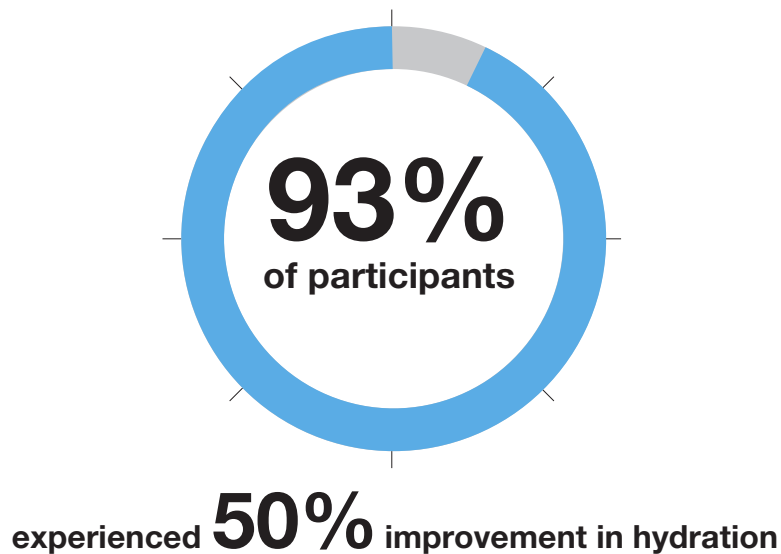

This advanced moisturizer offers rich hydration with a luxurious feel. Additional ingredients reduce the signs of visible aging and dramatically improve barrier function for optimal moisture retention. Dry, sensitive and mature skin become softer, smoother, plumper with a healthy glow.

.....

Clinical information

A study of twenty-six female participants from 20-55 years was completed at an outside, third-party testing facility to measure the benefits of a one-time application of **HydraLuxe Intensive Hydration**. Using VapoMeter® technology, the improvement in the skin's barrier function was measured by the amount of moisture lost through the skin's barrier at baseline, after two hours and again after four hours. The investigating scientist reported that after four hours, 92.31% of participants saw on average a 50.5% improvement in barrier function and reduction of transepidermal water loss (TEWL).

The result of HydraLuxe Intensive Hydration

Conclusion

The study demonstrated the **HydraLuxe Intensive Hydration** delivered a statistically significant improvement in barrier function; 50.5% reduction of TEWL after four hours. No adverse events were reported.
